Material Fact — Research Recruiting Site

Will anything I say be traced back to me?

…me you, your employer or your colleagues, and nothing you tell us reaches your employer. The brief reports patterns across all the conversations, never a single person.

Are you selling something?

No. We have nothing to sell you and this isn't a disguised pitch. The research is our own, and the only thing we ask for is 30 minutes.

Can I recommend someone else?

Please do. Forward this page, or send us a name and we'll reach out ourselves. We'll say you passed it on, unless you'd rather we didn't.

LET'S TALK

Tell us about your work.

A 30-minute conversation with us. No preparation needed, and no need to share confidential information. We're here to listen, learn, and get to know people working in the industry.

Material Fact — Research Recruiting Site

You help choose, manage, or improve the digital tools your company uses. · 03

WHAT YOU'LL RECEIVE

A perspective beyond your own company.

We'll share a short research brief with participants, bringing together common challenges, useful approaches, and questions that emerge from the conversations. You're welcome to share it with your team. The brief will not identify participants or their companies.

COMMON QUESTIONS

Before you say yes.

Do I need to prepare?

No. We ask about work you already do every day. There's nothing to read beforehand and nothing to bring.

I'm not sure I'm a good fit.

If you recognized yourself in any of the three points above, you are. We're not looking for experts on software. We're looking for people who know how one process really runs, including the parts nobody wrote down.

Will anything I say be traced back to me?

WHO WE'D LIKE TO SPEAK WITH

People close to the work

We're speaking with people at building-material and construction-product companies. You might recognize yourself in one or more of these:

You work with product information, specifications, quotes, orders, production, or technical support. · 01

You lead a team and see how work moves between people, departments, and systems. · 02

You help choose, manage, or improve the digital tools your company uses. · 03

Material Fact — Research Recruiting Site

We're interested in the processes you know well: what runs smoothly, where things get complicated, and how your team decides what to improve. A process you've improved, a system you've introduced, or a project that proved harder than expected is a good place to start. We'd like to understand where software helps and where it falls short.
